Chapter 1. Model - DCMotor

This is a report created for learning process.

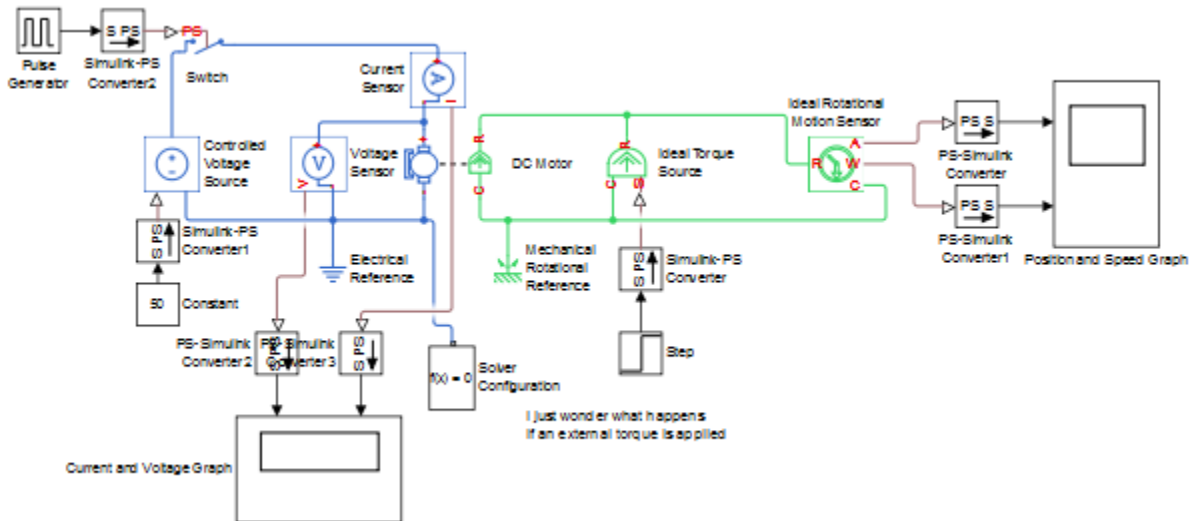

Figure 1.1. Current and Voltage Graph

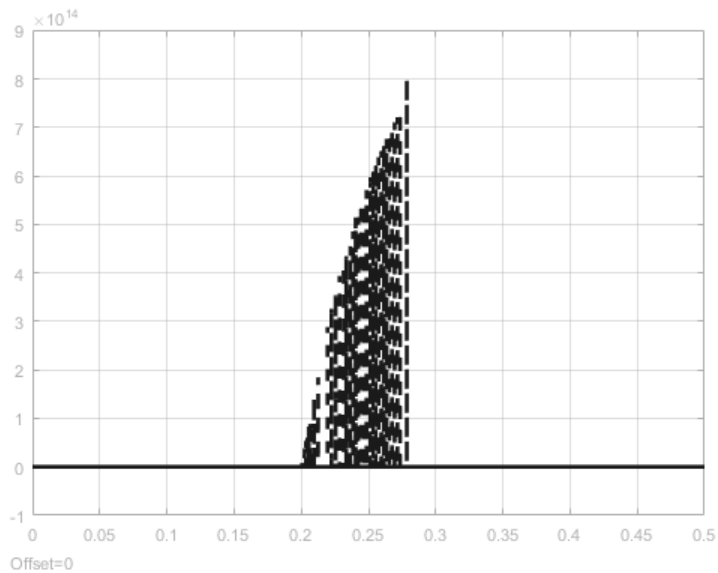

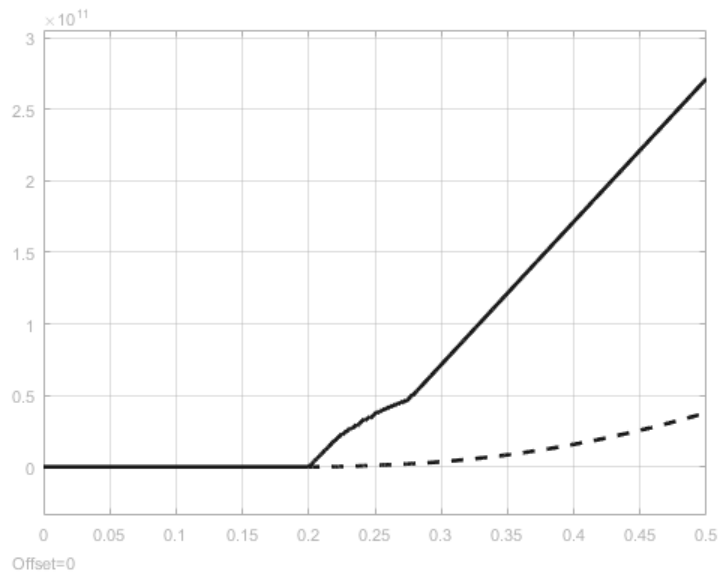

Figure 1.2. Position and Speed Graph

At the end, I have no enough time to complete whole model or report. However, I gained information about the procedure, usage of SourceTree & GitHub and Simulink environment. I also gained experience on Simulink Report Generator but it seems more detailed thing, so a tutorial about report generation might be very helpful.
